QUENCHING FURNACES

Electric oven for heat treatments, designed for tempering knives, axes, cleavers and much more.

It quickly reaches the maximum temperature of 1100 degrees and maintains it with absolute precision and constant uniformity.

The oven works silently thanks to a static unit and a latest generation digital thermoregulator and, on request, it is possible to apply a temperature programmer through which customized work programs can be created.

It is also finely painted in various colors of your choice, has an innovative design and has a microswitch designed to protect the operator to ensure maximum safety.
